**Affra - DeltaFlex**

During a very interesting period of advancements in the field of Hydrology we had the pleasure to participate in developing microprocessor-based systems like the flow-meter AFFRA and the more sophisticated DELTAFLEX. Now it is time to transfer the knowledge to younger partners, with Mr. Beat Gilgen, CEO of KERN Elektronik AG we found a competent and equivalent successor.

Thank you for the opportunity to serve you in the past and for sending interesting data reports.

We, KERN Elektronik AG came to an agreement with Wolfgang and Sigi Stedtnitz, to integrate all areas of the Deltaflex into our company and to continue the existing relationships. This includes production, distribution as well as maintenance, warranty and continuous development. For this purpose we are looking forward to a cooperation with Mr. Wolfgang Stedtnitz in the future. This way we will provide optimal service and technical performance for our customers.

KERN Elektronik AG is a long-term provider of sophisticated data-loggers, scientific instruments and sensors for Hydrologic Agencies the Deltaflex-Technology is the logical step in the right direction.

We are looking forward to an interesting and successful cooperation in the future.

Kern Elektronik AG  
Beat Gilgen

Wolfgang Stedtnitz
